Split & Tap

A modern solution for group bill splitting that works everywhere—from smartphones to feature phones—using QR codes, USSD, and SMS.

Made with GAMMA

The Problem

Long Payment Queues

Groups wait extended periods at payment terminals, creating frustration and inefficiency.

Social Friction

Manual calculations lead to disputes over who ordered what and how much each person owes.

Digital Divide

Not everyone has smartphones or reliable internet, excluding users from modern payment solutions.

Made with GAMMA

Three Ways to Join

01

QR Code (Smartphones)

Scan and open mobile web app instantly

02

USSD (Feature Phones)

Dial code for interactive menu system

03

SMS (Any Phone)

Receive notifications and reply to confirm

Made with GAMMA

How It Works

Host Creates Session

Enter bill total or item list—system generates QR, USSD, and SMS codes

Participants Join

Each person selects their portion or chooses equal split

System Calculates

Real-time share calculation updates as people join

Track Payments

Host dashboard shows instant payment confirmation status

Made with GAMMA

Host Dashboard

Bill Session: Table 7

Restaurant: Bistro Grande

Total: ₦13,000

Participants: 3 people

- Ali – ₦4,500 – Paid ✓
- Sara – ₦3,000 – Pending
- John – ₦5,500 – Paid ✓

Made with GAMMA

USSD Experience

Dial USSD Code

*123*456# launches menu

Join Session

Select from menu options

View Share

See calculated amount

Confirm Payment

Mark as paid instantly

Made with GAMMA

Backend Architecture

API Endpoints

- POST /create-session
- POST /join-session
- GET /session/:id
- POST /select-items
- POST /confirm-payment

Integration Points

- POST /ussd/callback
- POST /sms/reply
- WebSocket connections
- Real-time updates

Made with GAMMA

Edge Cases Handled

Late Joiners

Participants can join at any time, even after initial calculation

Session Management

Users can leave or be removed from active bill sessions

Split Types

Toggle between equal division and item-by-item selection

Offline Mode

Feature phones work without internet via USSD and SMS

Data Integrity

Handles duplicate names and incomplete settlements gracefully

Payment Status

Tracks pending and confirmed payments in real time

Made with GAMMA

Key Features

QR Code Generator

Instant web app access for smartphone users with automatic session joining

USSD Integration

Full menu system for feature phones with ₦3,500 example flows

SMS Notifications

Automated messages with share amounts and payment confirmation replies

Real-Time Updates

WebSocket connections provide instant dashboard refreshes for host and participants

Payment Tracking

Visual progress indicators show who has paid and who is pending

Mobile-First UI

Friendly, fast interface optimized for touch with responsive design principles

Made with GAMMA

Expected Outcome

Working Prototype

Host creates bill → QR/USSD codes generated → Participants join → Shares calculated → Status updates live

Unified Experience

Smartphones use web app while feature phones use USSD—all data synchronized

Real-Time Dashboard

Host sees instant updates as people join, select items, and confirm payments
